

IPL International Summer School: Science and Engineering

June 15 – July 13, 2023
Lyon, France

The €2150 program fee covers:

Housing in a student residence

Individual rooms with bathroom.

French classes

ECTS credits: 3. Three levels: beginner, intermediate, advanced.

Tentative list of cultural and industrial visits and activities

Transportation provided.

In Lyon

A city tour
A cooking class
A French session at the local market
A session on intercultural communication
A guided tour of the natural science and anthropology museum

And a few other places...

Geneva, Switzerland

CERN (European organization for nuclear research, includes Large Hadron Collider)
Visit of the center of town

Péruges

Tour of well-preserved medieval town
Tasting of traditional brioche and cider

The Ardèche region

Melvita: organic natural cosmetics manufacturer

Grotte Chauvet: archeological site and cave

Tain l'Hermitage

Valrhôna: chocolate museum and factory with tasting

Cave de Tain: tour of a winery with tasting

Romans-sur-Isère

Tanneries Roux: leather production site

Lunch provided: traditional *ravioles du*

Dauphiné

Musée de la Chaussure: shoe museum, presents history of leather goods in the region

Practical lab sessions at ITECH

ECTS credits: 6.

I. Adhesive formulation and practical work in application

Instructor: Sylvie Durdilly

Manufacturing, application, and controls of a wood adhesive with:

- Formulation of the adhesive
- Specifications
- The role of raw materials
- Control of bonds (on the wood shear ample)
- Shear test with a dynamometer
- Application of a pressure sensitive adhesive
- Loop tack test with a dynamometer

II. Manufacturing of decorative water-based paints

Instructor: Jean-Pascal Philibert

Main steps of the process

- Handling the raw materials for a white water-based paint (fillers, pigment, binder, additives)
- Carrying out all the stages of the process
- Application on standard panels
- Quality control of decorative paint: rheology/opacity/gloss/specific gravity/dry content
- Analysis of the results

Learning outcomes

- Process engineering: water-based coating manufacturing
- Structure/properties relations: impact of raw materials on coating performances
- Quality control: how to characterize a liquid paint formulation

III. How to design a plastic part: from design to manufacturing

Instructor: Cédric Boschard

How to choose a plastic material

- Practical work on materials recognition

How to design a part

- Demonstration on DAO software

The different manufacturing techniques

- Plus demonstrations in injection, thermoforming...

Learning outcomes

- Characterization of plastic materials (tensile, break...)
- Injection molding and thermoforming

IV. Practical work in colorimetry

Instructor: Caroline Goutteborge

Course content

- Presentation of basics of colorimetry: observation conditions (lights)
- Color characteristics (hue, chroma, lightness)
- Presentation of colorimetry software:
 - Quality control: interpretation of colorimetry data (Cielab color space)
 - Formulation, correction: use a pigments file to match a color

Practical work

- Reproduce a target color using colorimetric software and lights cabin

Learning outcomes

- Visual evaluation of color
- Measurement of tonality, saturation, color
- Color matching (with various tools)

V. Introduction to leather manufacturing

Instructors: Franck Diaz & Agnès Thomasset

Theoretical content

- Introduction to leather production and products (1 h)
- The basics of leather formulation (1h)

Practical work

- Production of finished leather by students (5h): garment, shoe upper, handbag leather on lambskin and cow hide.

June 15 – July 13, 2023

More information about the program available on the website: www.iplsummerschool.com

Learning outcomes

- Basics of protein reactivity
- Tannins and cross linking of collagen
- Hiding leather defects in leather
- Basic knowledge of leather production
- Dye and pigment selection

VI. Analytical chemistry

Instructor: Pascale Fillon

Practical work to learn chemistry laboratory skills, notably the following:

- Gas chromatography: gas chromatography principle and concrete application on the analysis of a mixture of unknown solvents (separation, identification and quantification)
- Infrared spectro-photometry principle: sampling techniques according to the product under analysis, highlight of major chemical bonds, identification of unknown polymers, concrete applications on any type of support (liquid, powder, plastic material, paint, textile, leather...)

Learning outcomes

- What gas chromatography analysis and infrared spectro-photometry are used for, what information they allow one to gather about a product
- "Reverse engineering": analyzing the components of materials
- Become familiar with some of the machines used to carry out these analyses, how to interpret the results

VII. Introduction to cosmetic products

Instructor: Caroline Bouchez

Theoretical class:

- What is an emulsion
- What are lipsticks made of?

Practical class:

Make-up products: lipstick

- Formulation and characterization of a lipstick
 - o with different waxes
 - o with different oil phases
 - o Controls: sensory tests

Skin care products: emulsions

- Formulation of oil/water and water/oil emulsions
 - o with different nature of surfactants
 - o with different oil phases
 - o Controls: pH, viscosity, centrifugation and microscope observations

Learning outcomes:

- Basic principles of chemical formulation with the added sanitary constraints applied to cosmetics
- Characterization: analysis and measure of materials' structure and properties
- Introduction to controls: quality, tests for desired properties
- Introduction to some of the main raw materials used in cosmetics

VIII. Introduction to textile manufacturing

Instructor: Fabien Roland

Presentation of the manufacturing textile chain, from raw materials to end-products

- Overview of textile technologies and relative machines
- Visit of the textile platform
 - o Spinning, weaving and knitting workshops
 - o Finishing and testing laboratories

Practical work: treatments on a cotton/polyester blend fabric

- Dyeing

June 15 – July 13, 2023

More information about the program available on the website: www.iplsummerschool.com

- Use of a dyeing lab machine, type jigger
- Development of a dyeing recipe and a dyeing process
- Analysis of the result: color yield, levelness
- Chemical finishing
 - Use of a finishing lab line, type padder and stenter frame
 - Development of a finishing recipe with fluorocarbon-based repellents
 - Analysis of the result: water and oil repellency control

Learning outcomes

- Textile manufacturing technologies
- Dyeing machinery and process
- Stain-repellent finishing

Applications open. Ideal for students with one or two years of undergraduate studies in science, especially chemistry.
